The Sage ACCPAC ERP platform is an award winning world class multi-tier solution development and deployment architecture. The MIMSYS system is designed on multi-tiered environments, which enhances performance and scalability.

MIMSYS draws expertise from persons with very deep and extensive experience in both software development and functional domain of products developed. With its international exposure and background, the company is highly effective in and has perfectly positioned the

products for the GCC, Middle Eastern, African, Indian, South East Asian, European and American markets.

Using industry-standard technology is not the same as having architecture. Many software companies without a real architecture make pretentious claims based on the technology they use, but do not own.

A superior software product is the embodiment of a superior architectural design, just like a beautiful building embodies beautiful real-world architecture. The architecture itself is the way that the product or building is organized. This organization determines the stability of the product or building and the limits to which it can extend its overall use and functionality. The way a software product is organized determines how well, or how poorly, it fits into the software landscape of industry-standard technology, how well it can adapt to new technologies and business and computing paradigms, and how well it can scale as transaction volumes and / or the number of users accessing the product increase.

Our Vision is to empower, enable and enrich Customers, Partners and Employees to be a chosen vehicle of growth for all stakeholders and a source of inspiration to society

Our Mission is to provide world class solutions to our customers by combining the depth of Management Best Practices, Business Knowledge and Technology Expertise to Deliver Business Value through High Performance Teams.
